Linux的Python-pip

刚入手了一个Service,却发现Ubuntu16.0.4没有pip,默认的源是微软的.

• 添加源(163的源都可以)

vim /etc/apt/sources.list #编辑源文件

进入vim普通模式按 i或o或a 进入编辑模式

```
deb http://cn.archive.ubuntu.com/ubuntu/ xenial main restricted universe multiverse
deb http://cn.archive.ubuntu.com/ubuntu/ xenial-security main restricted universe multiverse
deb http://cn.archive.ubuntu.com/ubuntu/ xenial-updates main restricted universe multiverse
deb http://cn.archive.ubuntu.com/ubuntu/ xenial-backports main restricted universe multiverse
## 测试版源
deb http://cn.archive.ubuntu.com/ubuntu/ xenial-proposed main restricted universe multiverse
#源码
deb-src http://cn.archive.ubuntu.com/ubuntu/ xenial main restricted universe multiverse
deb-src http://cn.archive.ubuntu.com/ubuntu/ xenial-security main restricted universe multiverse
deb-src http://cn.archive.ubuntu.com/ubuntu/ xenial-updates main restricted universe multiverse
deb-src http://cn.archive.ubuntu.com/ubuntu/ xenial-backports main restricted universe multiverse
## 测试版源
deb-src http://cn.archive.ubuntu.com/ubuntu/ xenial-proposed main restricted universe multiverse
# Canonical 合作伙伴和附加
deb http://archive.canonical.com/ubuntu/ xenial partner
deb http://extras.ubuntu.com/ubuntu/ xenial main
### shadowsocks的源(翻墙服务搭建)
deb http://shadowsocks.org/ubuntu trusty main
deb http://shadowsocks.org/debian wheezy main
```

我这里是添加的测试版的源,ESC退出到普通模式 :wq!保存

然后更新源:

sudo apt-get update
sudo apt-get upgraed

安装pip:

sudo apt-get install python-pip

安装完成

pip -V 出现了pip的版本:

pip 9.0.1 from /usr/local/lib/python2.7/dist-packages (python 2.7)

这样我们就安装完成了,可以尽情装逼了

pip install Django
pip install wheel
pip install scrapy

通过 pip list 可以查看当前安装的模块

出现了一个黄色的警告是提示你升级pip:

pip install --upgrade pip

pip uninstall scrapy # 卸载scrapy框架

当然除此之外还有很多,可以直接敲个pip就能出来帮助
